Search strategy - Trademarks

Chosen search strategy: Comprehensive

Description of accuracy

The Comprehensive search algorithm is built with a statistical method, using more than 10.000 official cases where two marks have been found confusingly similar by a government official in the US and the EU.

This means that the Comprehensive search and watch reports covers all the usual search strategies applied in manual searching, such as:

- identical
- phonetic similarity
- orthographic similarity and misspellings
- prefix, infix and suffix variations
- vowel and consonant similarity
- plurals and stemming
- abbreviations and acronyms
- other similarities

The Comprehensive algorithm also applies unique "noise" reduction techniques. This results in a lower number of results without affecting the over all quality (reaching more than 99% of potential conflicts).

Statistical Risk Analysis - Trademarks

The ranking of results is based on a statistical analysis of more than 10.000 official cases of confusingly similar trademarks in the EU or the US. The four "Risk levels" indicate statistically where you will find potential conflicts.

Level 1 - Very high risk.

Of all conflicts, 20% have these types of similarities. This group of results typically stands for less than 1% of the total amount of results.

Level 2 - High risk.

Of all conflicts in Europe or the US, 40% have these types of similarities. This group of results typically stands for only 5% of the total amount of results.

Level 3 - Medium risk.

Of all conflicts in Europe or the US, 25% have these types of similarities. This group of results typically stand for 20% of the total amount of results.

Level 4 - Low risk.

Of all conflicts in Europe or the US, 15% have these types of similarities. This group of results typically stands for 75% of the total amount of results.

Disclaimer

Our main sources for information are registers and documents created by others, we have limited control of how the information is retrieved or selected. Due to the subjective nature of this field, we cannot guarantee that the data, the result sets or the added comments and opinions are always correct.
